Recommendation

3.2 A2: JavascriptInterfaceAnalyser

Description

Evidence

```
/home/miki/Documents/GITHUB/AndroidPermissions/apks/playstore_apps/com_grppl_android_
shell_halifax/app/smali/com/mobile/ui/common/view/SecureCoreWebView.smaliaddJavascriptInterface
```

Recommendation

3.3 A3: Electronic Codebook (ECB) used for encryption

Description

Using the same encryption key, in ECB mode data blocks are enciphered individually from each other and cause identical message blocks to be transformed to identical ciphertext blocks. The independency of encrypted blocks also implies that the malicious substitution of a block has no impact on adjacent blocks. As a consequence, data patterns are not well hidden and message confidentiality may be compromised.

On Android, the Cipher API provides access to implementations of cryptographic schemes for the encryption and decryption of arbitrary data. To request an instance of a particular cipher, an application has to invoke the method `getInstance`, passing a suitable transformation string as parameter. Typically, this value is composed of the desired algorithm name, a mode of operation, and the padding scheme to apply. For example, to request an object instance that provides AES in ECB mode with PKCS5 padding, the transformation `AES/ECB/PKCS5Padding` has to be specified.

While it is indispensable to declare the algorithm to use, explicitly setting the mode and padding may be omitted. To fill the gap, the underlying Cryptographic Service Provider (CSP) relies on predefined values that do not necessarily reflect the recommended practice. Precisely, if the transformation indicates no operation mode, ECB mode is put in place. Moreover, the initially described problem with ECB is not limited to a specific cipher, such as AES but affects all symmetric block ciphers. Stream ciphers and asymmetric cryptosystems are not concerned since they do not involve an operation mode to repeatedly encipher blocks of contiguous data.

Evidence

```
/home/miki/Documents/GITHUB/AndroidPermissions/apks/playstore_apps/com_grppl_android_
shell_halifax/app/smali/kkkkkk/knnnkk.smali
/home/miki/Documents/GITHUB/AndroidPermissions/apks/playstore_apps/com_grppl_android_
shell_halifax/app/smali/kkkkkk/dxxdxx.smali
/home/miki/Documents/GITHUB/AndroidPermissions/apks/playstore_apps/com_grppl_android_
shell_halifax/app/smali/kkkkkk/dxxdxx.smali
/home/miki/Documents/GITHUB/AndroidPermissions/apks/playstore_apps/com_grppl_android_
shell_halifax/app/smali/kkkkkk/dxxdxx.smali
/home/miki/Documents/GITHUB/AndroidPermissions/apks/playstore_apps/com_grppl_android_
shell_halifax/app/smali/kkkkkk/dxxdxx.smali
```

Recommendation

It is recommended not to use ECB for encryption. Use an asymmetric encryption algorithm instead

3.4 A4: Activity (`com. halifax. halifax. GrappleActivity`) is not Protected. An intent-filter exists.

Description

A Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Activity is explicitly exported.

Recommendation

It is recommended to set the protection level to signature, so only applications signed with the same certificate can obtain the permission.

3.5 A5: Launch Mode of Activity (com. mobile. ui. webjourney. activity. AuthWebJourneyActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.6 A6: Launch Mode of Activity (com. mobile. ui. home. activity. YourAccountsActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.7 A7: Launch Mode of Activity (com. mobile. ui. settings. activity. SecuritySettingsActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.8 A8: Launch Mode of Activity (com. mobile. ui. settings. activity. PersonalDetailsSettingsActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.9 A9: Launch Mode of Activity (com. mobile. ui. settings. activity. SettingsAndInfoActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.10 A10: Launch Mode of Activity (com. mobile. ui. producthub. activity. ProductHubActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.11 A11: Launch Mode of Activity (com. mobile. ui. mobilechat. activity. MobileChatActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.12 A12: Launch Mode of Activity (com. mobile. ui. branchfinder. activity. BranchFinderActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.13 A13: Launch Mode of Activity (com. mobile. ui. unsuretransaction. activity. UnsureTransactionActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

3.14 A14: Launch Mode of Activity (com. liveperson. infra. messaging-ui. ConversationActivity) is not standard.

Description

An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent.

Recommendation

It is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
